1、 General Description

The MN3005 is world's first 4096-stage long delay BBD,8 times longer than 512-stage BBD manufactured by using a P-channel low noise silicon gate process.

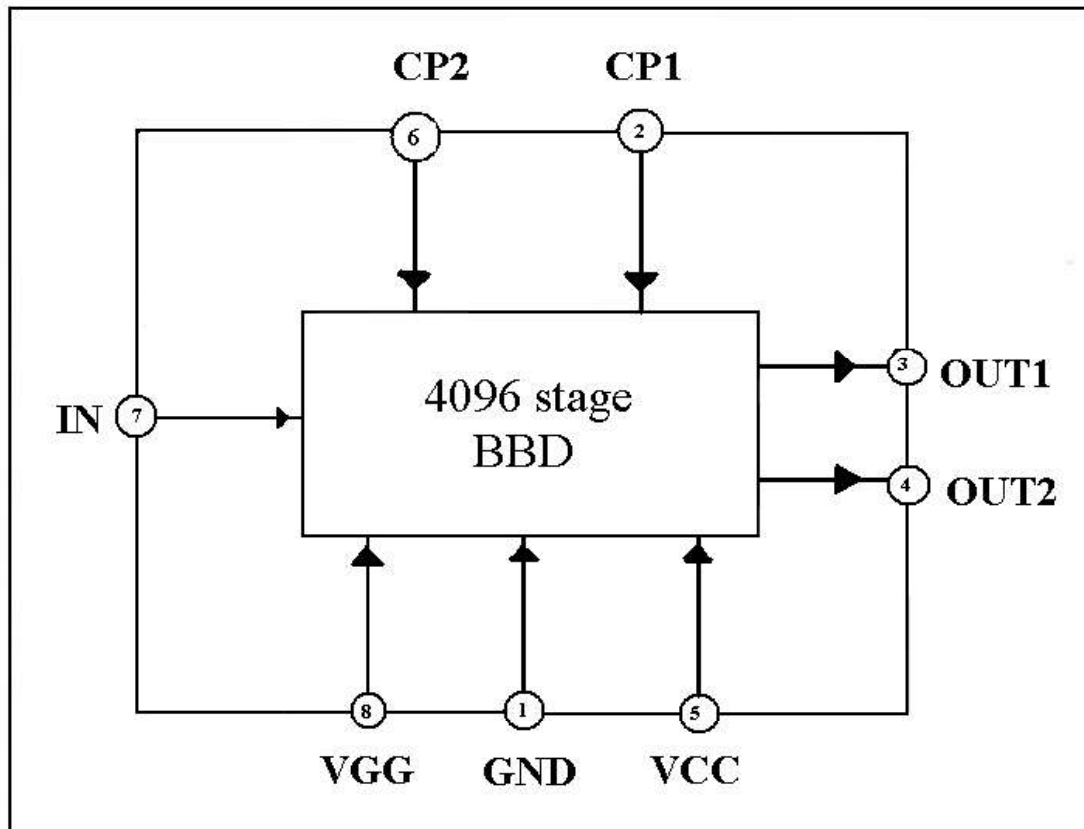

Long signal delay time 205ms can be obtained at clock frequency 10KHz.S/N is 75dB. S/N has been improved by more than 20dB in comparing with 8-connected 512-stage BBD's. The MN3005 is suitably used for reverberation and echo effects in electronic musical instruments such as electronic organ, guitar amplifier and music synthesizer which need long delay time.

Features:

- 1 chip 4096 stage and wide range of variable delay times: 20.48~204.8ms.
- High S/N in spite of multi-stage and wide dynamic range: $S/N \approx 75\text{dB}$ typ.
- No insertion loss since the loss occurring in the signal transfer is corrected by the MOS capacity of input and output. $L_i = 0\text{dB}$.
- High integration and high reliability by using P channel low noise silicon gate process.
- Special 8 lead dual-in-line plastic package.
